

Prevalence and recovery rate of persistent olfactory dysfunction in COVID-19: The COVORTS study

COVORTS cohort

76

- 18-60 years
- Recent (<3 months) COVID-19 infection
- >1 month olfactory dysfunction (OD)

Extended Sniffin' Sticks test

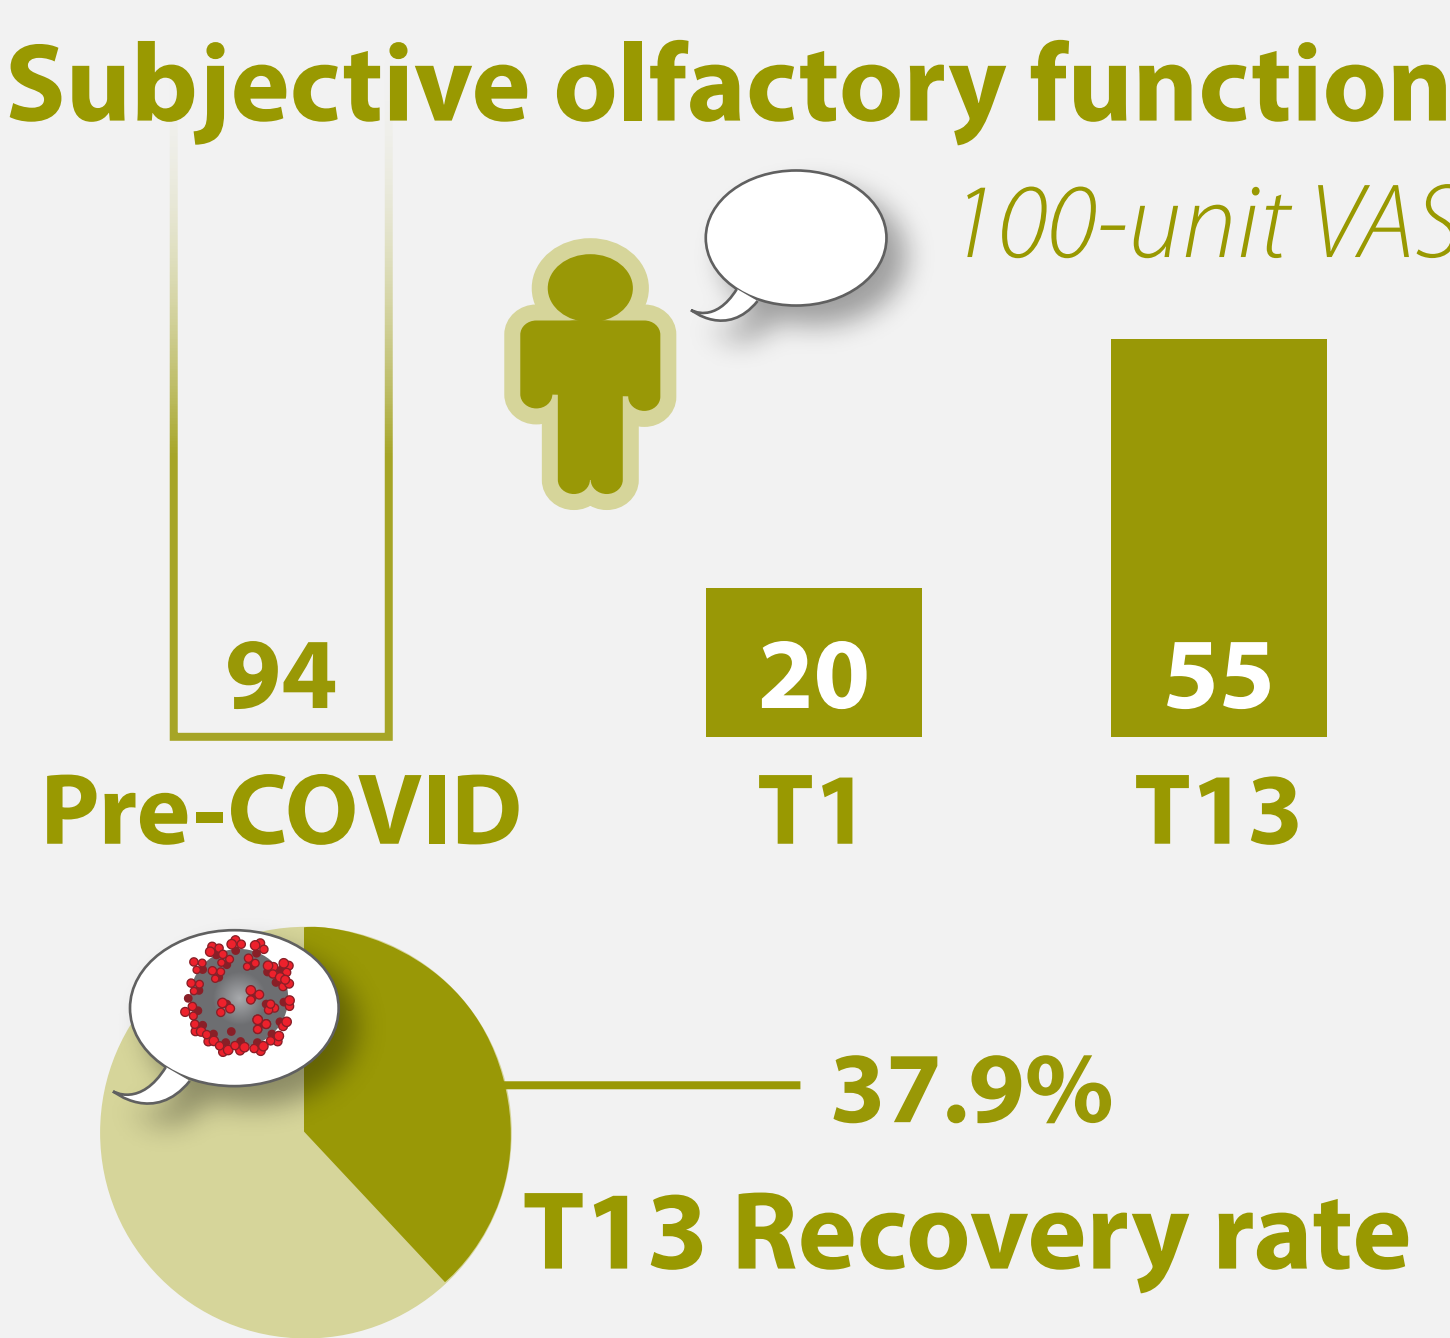

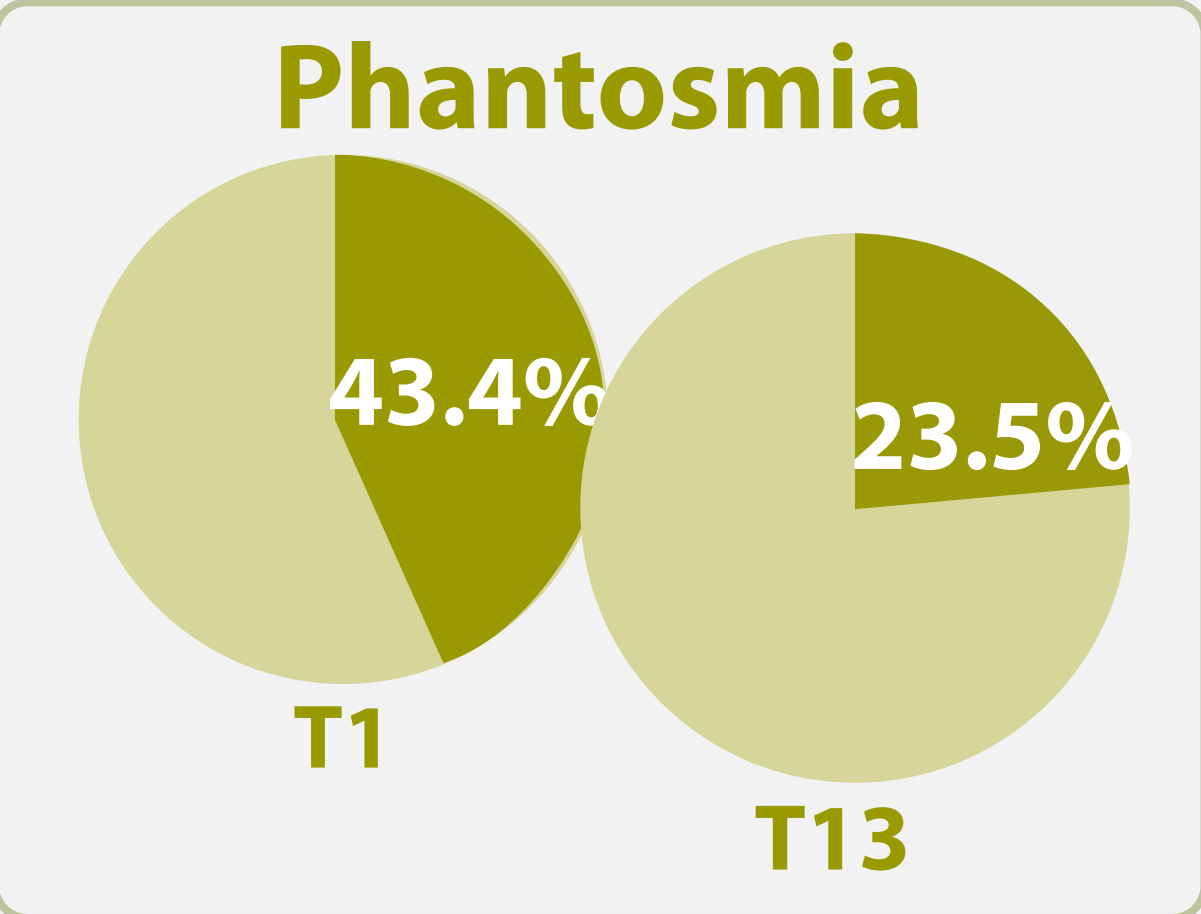

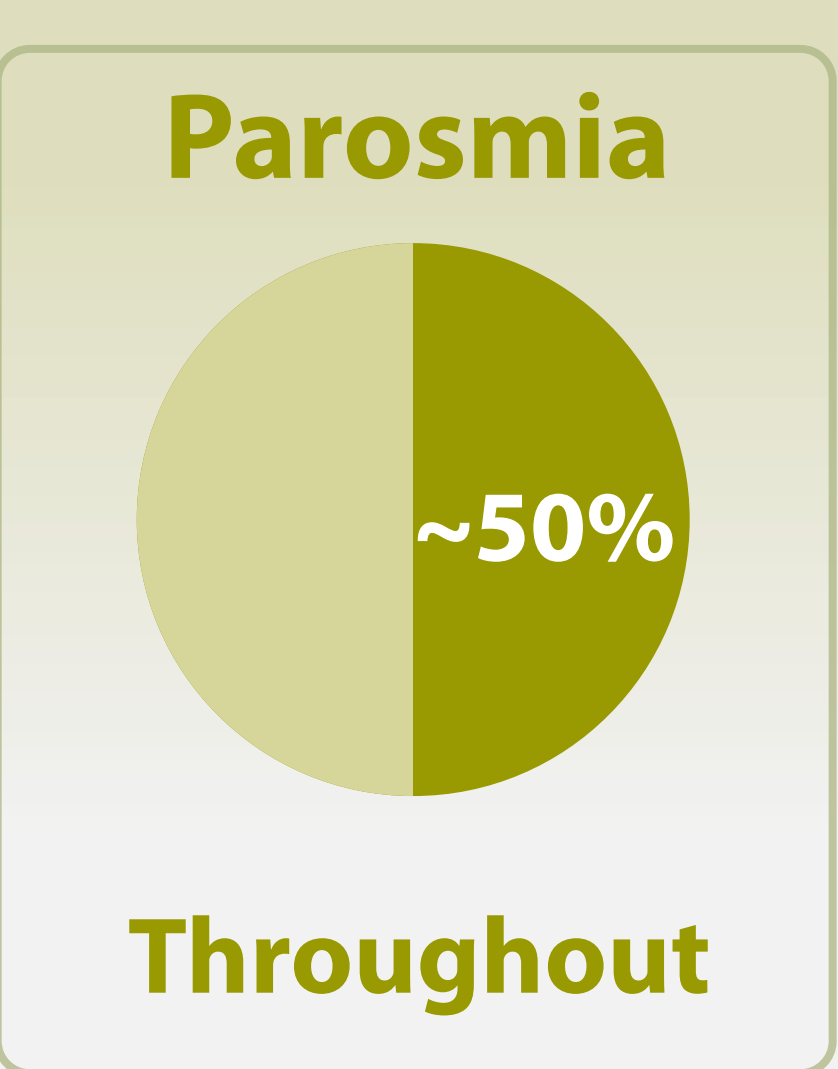

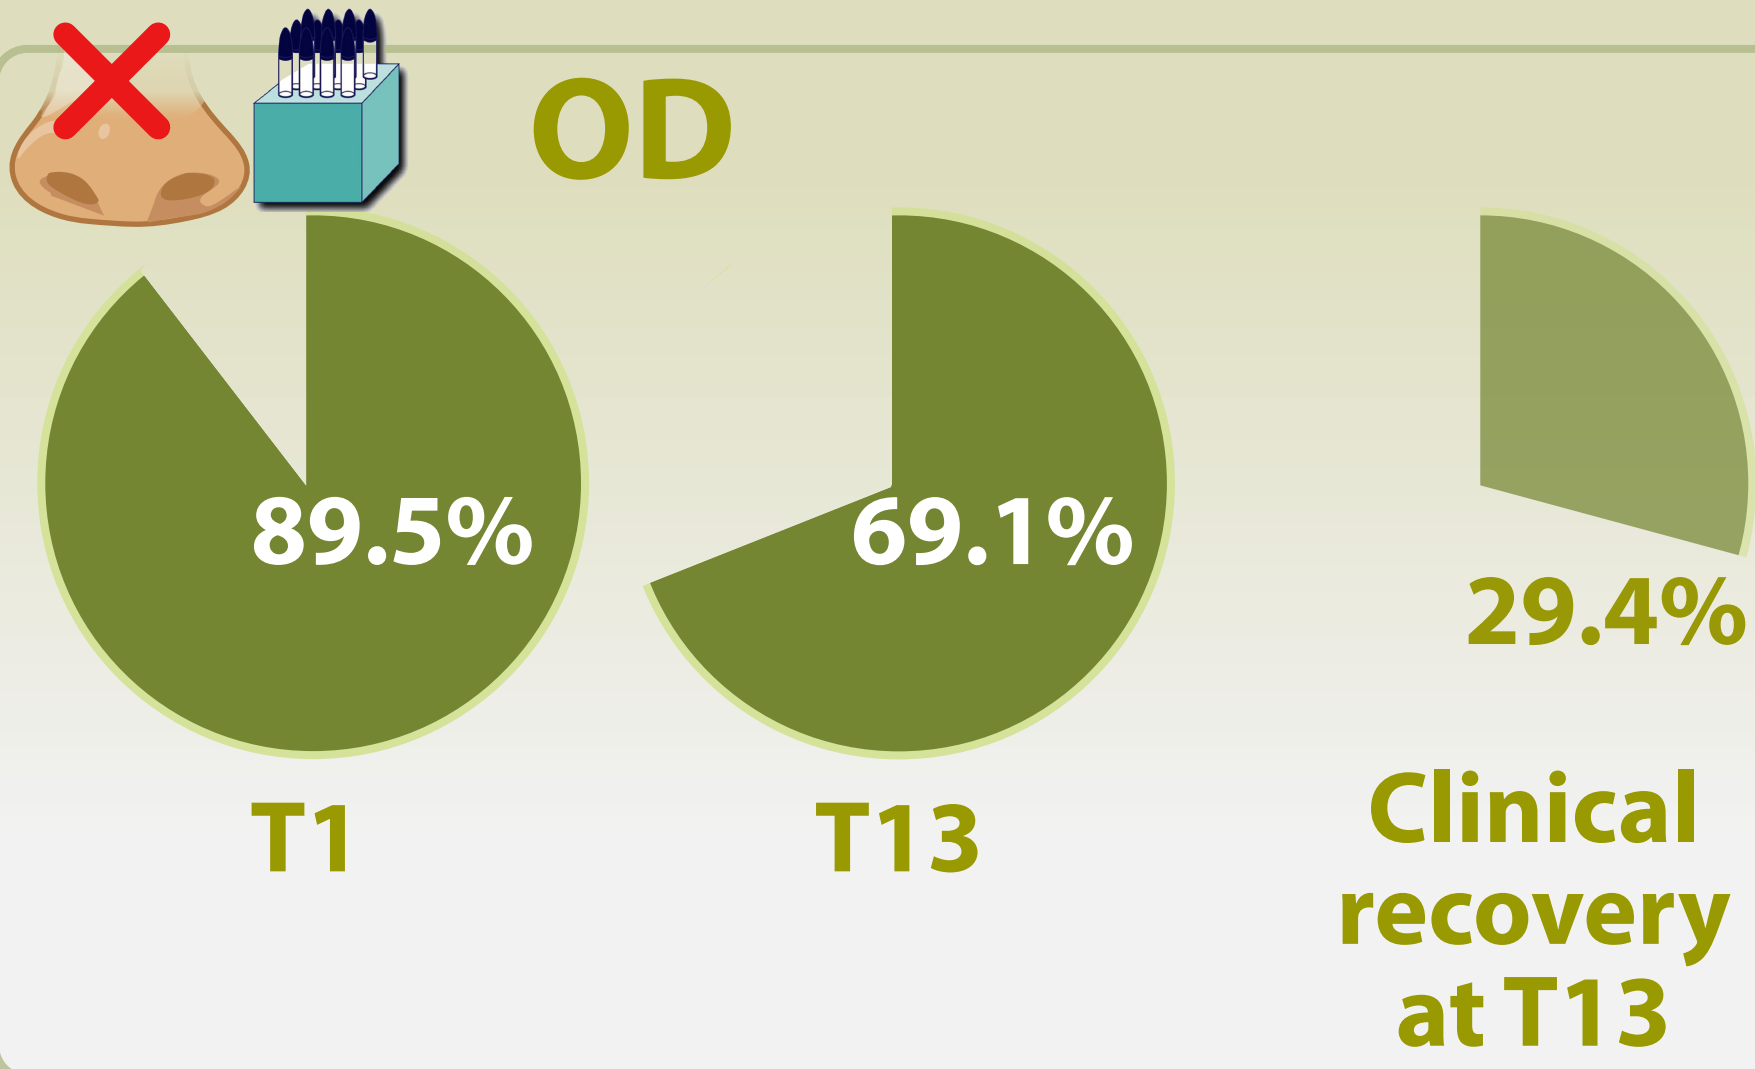

- Baseline (T1)
- 3 months
- 6 months
- 9 months
- 12 months (T13)

Questionnaires

Monthly

- Self-reported overall olfactory function
- Qualitative complaints

Individual fluctuations observed in all measures

- High OD prevalence ≤ 15 months after infection
- Low recovery rate
- Individual fluctuations indicate recovery is not always stable
