SUMMARY

During recent years medical information through Internet is increasingly available to both patients and professionals and ever more biomedical resources become available on line to assist in clinical medicine, education and research. The purpose of this article is to present a detailed list of all the worldwide web sites of rhinology that are accessible through the Internet.

Key words: computer communication networks, internet, rhinology, otolaryngology

INTRODUCTION

During recent years, the Internet has expanded from a tool of the scientific community and computer experts to the most promoted and universally growing technology (Glowniak, 1995; Pallen, 1995). The usefulness in the field of medicine is obvious, since general practitioners and specialists may communicate with experts from various countries and get informa-

tion about diagnostic and therapeutic issues (Kuppersmith et al., 1996; Kuppersmith et al., 1997; Burgess et al., 1999).

The Internet has always provided useful resources to otolaryngologists and specifically to rhinologists, but in recent years the

breadth and the content of the included resources have remarkably increased (Rothschild, 1996; Kuppersmith, 1996; Hutchinson, 1997; Saada, 1998; Rothschild and Kuppersmith, 1999). Many scientific associations, medical journals, academic departments, biomedical libraries and specialists, maintain on the world-wide web interesting sites with information about their activities (Tan, 1997). Useful sites to both, specialists and patients, may also be found on the web, providing educational material (Murphy, 1998), statistical data and all of the modern developments in rhinology. The aim of this paper is to present a detailed list of these sites, classified in broad categories.

DISCUSSION

Several sites including description of new endoscopic methods

of nasal and paranasal sinuses assessment and surgical treatment are presented. In addition, special effort was given to collect information concerning new operative techniques and their related advantages and disadvantages in facial plastic and reconstructive surgery and, especially, in rhinoplasty.

The allergy sites include information about etiology, pathophysiology, diagnosis and treatment of allergic and non-allergic rhinitis. Several other diseases of allergic origin, such as asthma and sinusitis, are included as well. Modern therapeutic guidelines are recommended, based on the significantly increased knowledge about the pathophysiology of these diseases.

The pathway of the sense of smell, starting from the molecular base of olfaction, the role of pheromones and the function of

the receptors at the olfactory region of the nose and reaching up to the olfactory centers of the human brain, are described in the related sites. New clinical data about smell disorders and basically about pathogenesis, diagnosis and treatment are included as well. Clinical centers specialized in patient care, diagnosis and treatment of nasal and paranasal sinuses diseases are also included.

The group of professional or support organizations, societies

and associations concerning otolaryngology, or specifically rhinology, includes many web sites with information about the objects and rules of the organization, announcements, educational material and membership information. Worldwide distribution of these organizations is observed.

Most otolaryngology journals are represented well on the Internet, by sites including information about the publishing companies, instructions to authors, information to subscribers and prices. Abstracts and lists of contents of all the past issues

are usually included, and sometimes full text articles accompanied by graphics and videos may be obtained. Although most of these journals are specialized in otolaryngology in general, a few of them include exclusively rhinology issues. On-line orders and subscription by e-mail are usually possible. Discussion groups and mailing lists about rhinology aspects maintained by various specialists or academic departments offer valuable information to other professionals or patients about various rhinology topics. Immediate interaction between the referring and consulting physician is usually possible, resulting in the acquisition of knowledge-based information and the improvement of medical education.

ENT news and otolaryngology conferences is a section with a few sites, but very useful to the busy specialists, because all new developments in otolaryngology are presented and information about upcoming medical conferences is available. Apart from news and conferences of general interest, specific rhinology topics are included as well.

Collective lists of otolaryngology resources on the Internet, including rhinology resources, are presented separately and some of them are an excellent start for navigation, by using the links of each site.

Finally, miscellaneous links of interest to the rhinologists or the patients are presented, such as cancer news, medical information concerning rhinologic diseases or imaging rhinologic material.

In conclusion, rhinology resources on the Internet have greatly expanded during recent years. The aim of this paper is to present a detailed list of all web sites of interest to rhinologists, in order to assist professionals familiar with the Internet to find any information easily, and further, to promote the usefulness of the Internet to specialists who are not quite acquainted with this medium.
